

OHP version 2.5

OverHead Projector presentation software

OHP is an editor and viewer for full-screen presentations under RISC OS, a computerised OverHead Projector but with sound and transition effects. It lets you create, load, change and save presentations containing slides you produce using the familiar RISC OS graphic editors (including Draw, Paint & Artworks).

The desktop drag and drop editor works very much like the RISC OS Filer letting you add, order and delete the slides in your presentation. You can define transition effects between the slides and an OLE function lets you edit slide graphics directly from the presentation window. OHP supports a wide range of sound file formats to add sound effects or sampled speech to your presentations.

OHP can be used interactively as you speak to an audience or to create fully automatic rolling presentations.

NEW!
Version 2.6 of OHP supports Exif format digital photos and automatically rotates them (if your camera supports it) so your pictures don't come out on their side. And best of all, if you have OHP 2.5, OHP 2.6 is a **FREE UPGRADE**

OHP Presentation Controls
To return to the Presentation now, press SPACE or click MENU again.

Effect keys, press again to cancel effect:

- B** Blank the display
- D** Draw with the mouse (by SELECT drag)
- R** Refresh the slide (Remove drawing or help)
- P** Pointer-arrow (or draw pencil) display
- S** Snapshot current slide (with any drawing)
- Ctrl** Slide hopper (with mouse buttons)
- Space** Cancel all options, show current slide
- Esc** Quit presentation and return to Desktop

- Use Sprite, Draw, Artworks and JPEG files as slides
- Add WAV, AudioWorks, Armadeus and other sound format effects
- Unique Slide Hopper for quick navigation during your presentation
- Full timing facilities and automatic rolling presentations
- Hidden slides and looping presentations
- Drawing tool and other presentation facilities
- Export slides to Powerpoint™ and other packages
- 22 Dissolve, 15 Wipe and 8 Cover transition effects
- Comprehensive 10,000 word user manual (in HTML) on the CD
- Version 2.5 adds more effects, more backgrounds, more compatibility and even easier editing

The latest release of OHP, the leading RISC OS presentation software package, has been updated to a 26/32-bit neutral version so it will run on RISC OS 5 (as used in the Iyonix) as well as on RISC OS 3.5 to 4.x.

The new release, OHP 2.5, includes extensive compatibility changes. These enable operation on RISC OS 5 and improved compatibility with large video modes (with Viewfinder, Omega and Iyonix in mind).

OHP 2.5 is not just for lucky owners of new hardware though. There are a number of enhancements over OHP2 that will work for everyone, including:

- * New 'actual size' mode for presenting bit map files
- * Improved slide selection and editing
- * Extended gallery of preset backgrounds
- * New transition effects and various other minor improvements.

OHP 2.5 is a chargeable upgrade from versions 1 or 2; version 2.6 is a free upgrade from 2.5. Upgraders should note that Photodesk/CJE will follow their normal practice of offering the upgrade price to those that return their previous OHP CD-ROM.

OHP requires RISC OS 3.5 or above including both RISC OS 4 and 5 (Risc PC, A7000, RiscStation, Iyonix pc, Omega etc). OHP requires a hard disc and at least 16MB of RAM. OHP is supplied on CD ROM.

OHP is distributed on behalf of Photodesk Ltd by:
CJE Micro's, 78 Brighton Road, Worthing, West Sussex, BN11 2EN, UK.
